

# Majo Richter

Software Engineer

majo@coreunit.net | Hannover, Germany | Portfolio: [noblemajo.de](#) | [GitHub](#)

## SUMMARY

Software and DevOps Engineer based in Hannover, Germany, specializing in full-stack web development, cloud infrastructure, and automated delivery pipelines. Possesses deep technical expertise across Go, TypeScript, Bun, Node.js, and Angular, paired with extensive experience orchestrating high-availability containerized environments using Docker, Kubernetes, Linux, and Terraform. Demonstrates a strong track record of engineering resilient backend microservices, real-time IoT data ingestion APIs, and enterprise single-page applications. Holds dual formal qualifications in Software Engineering and Electrical Systems, combining hardware-level system comprehension with modern cloud-native architecture, rigorous automated testing practices, and active contributions to open-source developer tooling. Outside of core engineering, actively leads technical online communities, streams live software development, and produces digital audio.

## PROFESSIONAL EXPERIENCE

**Founder & Lead Software Engineer** at CoreUnit.NET

Jan 2016 to Present

Hannover, Germany

- **Platform Leadership:** Co-founded CoreUnit.NET in 2016 as a non-profit community platform dedicated to technology, gaming, creative content, and digital collaboration.
- **Community Infrastructure:** Established and managed central Discord server operations, public status dashboards, and documentation hubs for the community.
- **High-Performance Web & CLI Tooling:** Designed lightweight utility ecosystems for the organization using Go, TypeScript, and Bun, focusing on extreme performance, rapid local execution, and low runtime overhead.
- **Engineering Quality & Automation Best Practices:** Introduced strict developer workflows to the organization, integrating E2E Makefile targets, automated linting, type-checking, and zero-warning build pipelines for community projects.

## TECHNICAL EXPERTISE

**Programming Languages & Runtimes:** Go, TypeScript, JavaScript, Bun, Node.js, PHP, Java, Python, C#, HTML5, CSS3, SQL, Bash, Makefile

**Frameworks & Libraries:** Angular, React, Express.js, Tailwind CSS, Fuego, RxJS, Node-fetch, Vite

**Cloud, Infrastructure & DevOps:** Kubernetes, Docker, Linux, Terraform, OpenStack, GitLab CI/CD, GitHub Actions, Git, WireGuard, SSH, SFTP, Let's Encrypt, Helm, Nginx

**Databases & Storage:** PostgreSQL, Redis, MySQL, SQLite, OpenStack Swift, Key-Value Stores, Object Storage

**Architecture & Methodologies:** REST APIs, WebSockets, Model Context Protocol, System Architecture, Microservices, Infrastructure as Code, CI/CD Automation, Test-Driven Development, OOP, MVC, DRY, KISS, Automated Linting, E2E Testing

**Domains & Expertise:** Software Engineering, DevOps Engineering, System Administration, Hardware Automation, Network Engineering, CLI Tool Development, Open Source Maintenance, Web Performance Optimization

## EDUCATION

**Vocational Education / Apprenticeship in IT Specialist in Application Development** at Hosting Provider (GPA:

3.8/4.0)

Jan 2014 to Dec 2015

Hannover, Germany

## KEY PROJECTS

**explorer-mcp** | Author & Lead Developer | [github.com/NobleMajo/explorer-mcp](#)

2026 to Present

A read-only Model Context Protocol (MCP) server engineered to provide AI models fast and secure access to local repositories and codebase structures.

- Developed a specialized MCP server in Go to expose folder structures and file contents safely to LLM clients.
- Reduced context-gathering token overhead for AI coding tools by implementing strict read-only context extraction.

**DeployIT** | Author & Lead Developer | [github.com/NobleMajo/DeployIT](#)

2024 to Present

An automated deployment tool written in Go that uses SSH and SFTP to deploy server configurations and execute remote commands.

- Streamlined server deployment workflows by combining SFTP file synchronization with remote SSH command execution in Go.
- Reduced deployment friction for remote Linux hosts through reproducible, scriptable server update sequences.

**wgg** | Author & Lead Developer | [github.com/CoreUnit-NET/wgg](#)

2024 to 2025

A WireGuard configuration generator written in Go that automates peer-to-peer (P2P) node and client network generation.

- Automated WireGuard mesh network generation, key distribution, and interface configuration files for P2P topologies.
- Simplifies encrypted network provisioning across distributed Linux servers and community infrastructure.

**vault** | Author & Lead Developer | [github.com/NobleMajo/vault](#)

2024 to Present

A command-line file encryption and decryption tool written in Go, engineered for secure and lightweight data protection. A command-line file encryption and decryption tool written in Go, engineered for secure and lightweight data protection.

- Implemented modern cryptographic algorithms in Go for file-level data encryption and decryption.
- Designed a zero-dependency CLI interface optimized for high execution performance and minimal binary footprint.

**bun-route** | Author & Lead Developer | [github.com/NobleMajo/bun-route](#)

2024 to 2025

A lightweight, Express-like HTTP router designed specifically for the high-performance Bun runtime and `bun.serve()`.

- Built a high-speed HTTP routing library tailored to Bun native server primitives to minimize overhead.
- Provided familiar Express-style middleware and endpoint registration patterns for TypeScript backend applications.

**PUBLIC PROFILE NOTICE & CONTEXT**

**Public GitHub & Open Source Activity Overview** | Notice Regarding Portfolio Scope

2026

This portfolio section reflects public open-source contributions, repositories, and community activities visible on the "NobleMajo" GitHub profile. It represents a targeted subset of publicly available information and does not encapsulate the complete, non-public career history, enterprise projects, or private contributions of the engineer behind the account.

- Highlights publicly accessible codebases, open-source tools, and community platform infrastructure.
- Excludes private client implementations, internal enterprise codebases, and non-disclosed corporate developments.

**LANGUAGES**

German (Native) | English (Advanced)
